

# Free Rain Garden and Stormwater Management Workshop

## ABOUT

Rain Gardens are a beautiful addition to your property and can help improve water quality in your community. Attendees at these workshops will learn about the problems associated with uncontrolled stormwater runoff, what a rain garden is, how to construct a rain garden on your property, how to maintain a rain garden, how a rain garden can improve water quality in your community and general watershed friendly landscaping techniques.

## WHAT IS A RAIN GARDEN

Beautiful landscaped areas built down, instead of up, intercepting runoff from buildings, driveways and other impervious surfaces before it can reach the storm sewers and streams. Small gardens are typically 6-12 inches deep and drain within a day or two after a rain. Plants are water and drought tolerant and need little or no watering after they are established.

## REGISTRATION

Registration is free. Advanced registration is requested under the events tab at [www.dcva.org](http://www.dcva.org)

## UPCOMING WORKSHOPS:

**March 7, 2020 from 10AM to 12PM**  
Drexel Hill Middle School (cafeteria)
